Kver - a keyboard-friendly PDF reader

A keyboard-friendly PDF reader, starting on macOS.

Kver aims to be a responsive PDF reader for people who spend a lot of time reading documents. A single-page technical prototype exists; there is no downloadable reader yet.

The name Kver is Icelandic for a small book or booklet.

Inspired by Sioyek and Skim, Kver aims to pair keyboard navigation with a minimal desktop interface.

Although particularly suited to developers, researchers, and technical users, Kver aims to be a general-purpose PDF reader that is equally comfortable with a mouse.

Goals

- Fast and responsive PDF viewing
- Keyboard-first, but not keyboard-only
- A first downloadable release on macOS, with Linux and Windows as separate targets
- Minimal, distraction-free interface
- Powerful navigation inspired by Vim and Sioyek
- Search, text interaction, and reading-position restoration as the reader matures
- A visual ruler and configurable keyboard shortcuts as future goals
